Notes -

- The typical Prices indicated above include GST, all transport (Sunshine Coast jobs only), materials and labour, for a corrugated metal roof of sufficient area, suitable slope and facing in a northerly direction, close to the existing switchboard, for jobs that are eligible to create Solar Credits REC's (Renewable Energy Certificates). These prices are a guide, not a formal quote.
- Payment option A - you pay the total job cost with payment of REC's assigned to your self via the STC clearing house. 10% initial deposit + a further 40% payment when materials are ready, then we install and the 50% balance payment is required, we will help you with REC paperwork.
- Payment option B - you assign payment of the REC's to Voltmaster Electrical Contracting (under this arrangement we charge interest on the REC's until they are paid, and where REC value decreases below their value at the time of quote, you may be required to make a balance payment equivalent to the difference in the REC value at the time the REC's are created). 10% initial deposit + a further 40% payment (or up to the value of cost after REC's for Payment Option B whichever is the lesser) when materials are ready, then we install and the balance payment is required (up to the value of cost after REC's for Payment Option B), we will help you with REC paperwork.
- Payment option C is for customers who prefer to pay 85% of full job cost to cover the cost of the materials which then gives you a discount of 2% on the total job cost, REC's are assigned to yourself via the STC clearing house. 10% initial deposit + a further 75% payment when materials are ready, then we install and the 13% balance payment is required, we will help you with REC paperwork.
- Additional cost will apply for tilt kit where required, see Tilt Pricing guide, or for non-standard array configurations.
- Where an on-site risk assessment shows that additional safety measures (pest control, elevated platform vehicle, scaffolding or safety edge protection) are required in addition to our standard safety gear, these costs shall be paid for by the customer.
- Additional cost may apply for any switchboard or wiring upgrades if required, including PV system cabling where the route length exceeds 20m.
- Additional costs may apply (from your electricity retailer) for installation of reverse energy metering.
- REC's can only be created after a system has been commissioned, the "after REC" prices are based on current REC prices which are subject to change due to market fluctuations. If you are claiming the REC's yourself such as in payment options A & C, you have 12 months from the date that the system is commissioned in which to create the REC's. The \$39.90 REC price for Payment options A & C is via Renewable Energy Traders STC clearing house, see <http://renewableenergytraders.com.au/id6.html> for details. For payment option B, REC's are valued at the wholesale STC REC price @ \$26 / REC (assigning payment to installer) which is subject to change due to market conditions.
- Solar Credits REC's are subject to the Renewable Energy (Electricity) Amendment Regulations and any further legislation changes, please visit [ORER](http://www.orer.gov.au) for current details.
